WIRELESS / CHARGER / Wireless Charger for Cell Phone

Operating profile :

I. Operating Guide

A. Connect the charger's on/off button and Place the cell phone correctly on the charging area of wireless charger panel in 15 seconds , the wireless charging function can be started. When charging, the Led lights of wireless charger is red and long on, means this time get into the normal charging stage.

B. If the Led light emitted rapidly flashing red lights, means this time abnormal charge. Please check the charging device, and confirm the location of the phone whether placed correctly or not. The induction accept coil of phone back shell should be placed in the charging area of the charger panel (shown above the center position of panel). The general back shell central location for the mobile induction coil, can be confirmed the best placement by several mobile phone charging operation. If unable to solving the faults after the above operation, please contact with your dealer or manufacturer.

C. Led light is green, indicating that power has been filled with or equipment no need for charge.

II. Wire charger Operating Guide

A. Firstly please plug one end of the cable of Micro-USB connector into the charger's input interface. Then connect the other end of the charging cable into the USB interface of the Adapter. And plug the Adapter into an AC power outlet. Or directly plug the charging cable into the computer's USB port.

B. Then connect the charger's on/off button, you can use it. Notice: The wire charger and the wireless charger can't use at the same time.

WIRELESS / CHARGER / Wireless Charger for Cell Phone

Characters:

This product is wireless charger, charge for the equipment which supported Qi standard .charge For the phone in the fragments time, eliminating the frequent plugging the power cord .The products using intelligent microprocessor control technology, ultra-low standby function, and had over-current protection, full stop function .Support external foreign object detection (FOD).Has the indicator prompts during operation .

Questions and Solutions:

1. Please make sure the phone is properly placed in the charging area of the charger pane when the mobile phone is not charging or charging time is too long .If placed incorrectly,please readjust phone's location .

2. When the charging is abnormal, please pick up the phone and placed back on the wireless charger panel (the interval at least 5 seconds). If the problem persists, you can unplug and then plug in, so re-power the wireless charger work.

3. Differences exist for the testing of phone electricity is fully or not in the charging process, some mobile battery indicator is full, after a period of time the wireless charger will enter full stop.

Precautions:

1. Patients should consult a doctor before using wireless charger, because it will generate an electromagnetic wave which may affect the normal operation of heart pacemaker.
2. Do not let the magnetic cards and magnetic storage close to the products for a long time, in order to avoid data loss.
3. During the charging process, don't put the metal object barrier between the charging device and the wireless charger. According to the principles of wireless charging the metal object barrier will make wireless charger getting high heat when charging. It will damage the wireless charger in a great chance, or even cause a fire.
